

# ClockWatch

**ClockWatch** combines clear traffic-light type signalling with a simple-to-use timekeeping system. The intuitive control module has been designed especially for non-technical users so they can easily manage formal timekeeping in a wide variety of applications.

Total flexibility of the system enables timekeepers to either manually operate the LightTower signal(s) at any time by simply pressing the direct control Green, Amber or Red buttons, or use any one of four programmable, preset time profile buttons to initiate their required timed sequence. As time elapses, the optional LightTower(s) change from Green to Amber and finally Red, according to the programmed profile. The numeric display on the control module changes colour also and the sequence can be paused, resumed or reset at any time.

Numerous Interspace Industries display options can be used with ClockWatch including the LightTower, either of the 25mm (1") or 75mm (3") digital displays (depending on whether long or short distance viewing is required) or the discreet tricolour intelligent lamp.

Designed for reliability and versatility, ClockWatch is based on AV-Industry-proven rugged design, uses readily available 3pin XLR (mic) cable connectors and the system can be set up in just 1-2 minutes, or be permanently installed if required.

ClockWatch is ideal for public sector organisations where set timings are used to control public speaking entitlements.

## 3 Year Limited Factory Warranty

## Interspace Industries LLC
